Education

• Memorial University of Newfoundland

St. Johns, NL, Canada
Sept 2023 to Apr 2028

Bachelor of Engineering - Electrical Engineering

- Third Year Student (GPA 3.95/4.0) currently enrolled in Term 6
- Scholarships & Awards:** Faculty of Engineering & Applied Science Dean's List (**2024, 2025**); PEGNL Academic Scholarship (**\$2,500, 2024**); Memorial University Entrance Scholarship (**\$6,500, 2023**)
- Skills:** ETAP, AutoCAD, KiCAD, PSpice, MATLAB, DIALux, Revit, Python, SQL, Power BI, MS Office Suite

Work Experience

• Irving Oil

Saint John, NB, Canada
May 2026 - Present

Electrical & Instrumentation Reliability Engineering (Co-op)

- Support refinery electrical and instrumentation reliability through field analysis, failure investigations, and design reviews on low-, medium-, and high-voltage systems to improve safety, reliability, and uptime.
- Assist with power distribution and substation maintenance activities by validating P&IDs and drawings, supporting design changes, and helping strengthen the long-term performance of refinery electrical assets.

• Brightisle

St. Johns, NL, Canada
Apr 2025 - Present

Data Analyst (Remote Part-time)

- Maintain and enhance Power BI and Tableau dashboards in Microsoft Fabric, improving operational visibility, schedule tracking, and planning support across healthcare programs.
- Develop automated workflows and data systems using Power Automate, SharePoint, SQL, and Python to improve process reliability, data accuracy, and reporting speed for senior leadership.

• Irving Oil

Saint John, NB, Canada
Sept 2025 - Dec 2025

Electrical Engineering Intern (Co-op)

- Designed and revised EHT circuits and AutoCAD drawings, completed load calculations, and configured PLC logic and EHT controllers to support refinery-compliant, reliable electrical systems.
- Performed field troubleshooting of heat-trace systems and instrumentation, verifying continuity, resolving faults, and strengthening system reliability and operational uptime.
- Built and updated an ETAP model for a part of the refinery, performing load flow, short-circuit, arc-flash, and protection studies to assess equipment performance and support reliable operation.
- Supported the Co-Gen integration project through equipment assessments and ETAP load-flow and protection studies, updating electrical drawings to ensure safe, reliable, and efficient tie-in execution.

• Seafair Capital

St. Johns, NL, Canada
Jan 2025 - Apr 2025

Project Management Intern (Co-op)

- Led payroll and HR process improvements, delivering Python, SQL, Power Automate, and Power Apps solutions that cut manual work by 50% and improved process reliability.
- Built unified Power BI & Tableau dashboards and automated data pipelines across BlueSky, Momentum, and Caregivers, enabling real-time monitoring and faster issue detection.

Relevant Projects

• IoT-Based Child Monitoring and Environmental Control System 🔗

Jan-2026

- Built an ESP32-S3 instrumentation and controls prototype integrating 3 sensors, 4 room conditions, and 2 separate 12V loads through dashboard control, MOSFET switching, and regulated low-voltage power.
- Strengthened system reliability with 3A input protection, 12V-to-5V regulation, and structured testing that demonstrated repeatable alert response and stable operation.

• Optical Heart Rate Monitor | Analog Instrumentation & Signal Processing 🔗

Mar-2026

- Designed a low-voltage optical heart rate monitor that used sensors and analog signal-processing circuits to detect pulse activity and trigger clear visual alerts for normal and abnormal readings.
- Improved system reliability through step-by-step calibration, troubleshooting, and repeated validation, achieving stable performance across 4 separate 6-hour test runs.
